

Protecting your Patch Workshops – Waimana and Taupo

**On farm biosecurity is so much more than disinfectant
tub washes of boots at the gate.**

Two events near you:

Acacia Bay Community Hall
Wednesday 27 August
11:00am – 3:00pm

Waimana Memorial Hall
Thursday 28 August
10:00am – 2:00pm

When we think about biosecurity we go straight to the big guns such as *M.bovis* and Foot and Mouth Disease. But what about the diseases you are working hard to avoid such as BVD, TB, drench resistance, or those you have come to accept such as Johnes Disease and footrot.

Join us for this informative, hands-on workshop where you can build a plan to protect your patch from diseases that could cost you in lost production or be catastrophic for our sector.

Topics covered

- Understanding drystock biosecurity guidelines.
- On farm interventions and practical tools such as a Biosecurity WOF to help protect your patch.

Facilitator

Facilitated by Will Halliday (BVSc),
Senior Manager Technical Policy,
Beef + Lamb New Zealand.

Light lunch provided

Registration essential. To register visit www.beeflambnz.com/events and search for this event or click on the link or scan the QR code.
